

## **Covid-19: Weekly Situation Bulletin**

February 14<sup>th</sup>, 2022

On a national scale, the peak of the Omicron wave has passed in France, England, Spain, Italy and Belgium. The Netherlands is still in the ascending phase, while Germany is showing the first signs of slowing down.

This decrease of the Omicron wave is reflected in our network with a decrease in the number of cases in Italy, France, Belgium and England. However, the epidemic pressure is still present, particularly in Germany with a total of 4.5% of residents and nearly 4.3% of all employees testing positive.

As a reminder, the vaccination coverage rate in our network is very high, thanks to the vaccination requirements in force in most countries, with over 90% of residents up to date with their booster. As far as employees are concerned, the coverage rate remains close to or equal to 100% in France, Italy and Spain. It should be noted that the rate of vaccinated professionals in Germany continues to rise to 89% in anticipation of the mandatory vaccination of health professionals in mid-March.

Thus, the situation remains under control with more than 99% of positive residents not or only slightly symptomatic
