

Covid-19 : Weekly Situation Bulletin

14th of June 2021

Epidemic situation in Europe

The health situation in the countries where the group operates continues to improve with incidence continuing to fall and vaccination rates rising. Almost 30% of the general population is fully vaccinated and more than 20% has already received its first dose. This situation allows most countries to anticipate the easing or even lifting of restrictions in preparation for the summer period.

Epidemic situation in the Korian network

The health situation in our network is following this very positive trend in connection with the high vaccination rates.

Thus, today, only 1 establishments still had 4 or more cases, with 12 positive residents totally asymptomatic. Less than 0.1% of the residents and 0.18% of the staff (health and medico-social sector) were positive to the health Covid-19 in our network follows this very positive trend in connection with the high vaccination rates.

Vaccination campaign in the Korian network

Our vaccination rates are excellent, with 99% of residents and 78% of staff having received at least one dose of vaccine, and 94% of residents and 75% of staff fully protected. The team vaccination campaign in France is being actively pursued to reach 80%. While the French Minister of Health, Olivier Véran, last week called on healthcare workers to accelerate their own vaccination - even going so far as to indicate that he might make it compulsory - the Korian network has been fully mobilised for several weeks, through a very active internal communication campaign.

Testing policy

Around 80,000 tests are still carried out weekly with residents/patients or staff. The significant decrease in the number of tests carried out each week is linked to the relaxation of the rules due to the high vaccination rates. In Germany, for example, the frequency of testing for staff has been reduced from daily to weekly for facilities in an area with an incidence of 50/100,000 or less and a staff vaccination rate of over 70%.

Hygiene standard and preventive measures

The new mutations encourage us to remain vigilant in respecting barrier measures.

Access to facilities, activities and visits

Given the confirmation of the effectiveness of the vaccine protection, outings and free visits are the rule. Except for a particular and temporary local situation, visits are now made without making an appointment for vaccinated persons.

Even if vigilance remains necessary with the threat of new variants, the Korian network has always been very careful to maintain the various social activities and visits in all its establishments, for the quality of life and comfort of residents and patients.

Doctor Didier Armaingaud,

Medical, Ethics & Quality of Service
Director of the Korian Group

Korian is Europe's leading Care Group serving the elderly and frail. It is present in France, Germany, Italy, Belgium, Spain, UK and the Netherlands.
